HF SPORT EXERCISE POOLS

HeatForm exercise pools, with a choice of integrated counter current options, are designed to optimise all levels of training and physical therapy, from intense triathlon training through to gentle rehabilitation.

HeatForm exercise pools are available in two sizes HF SPORT 5000 (2.5m x 5m) or HF SPORT 6000 (6m x 3m) with a water depth of 1.2m. They are suitable for use both in-ground or above-ground installations, indoors or outdoors.

Make your dream pool a reality, putting exercise, fun and relaxation within easy reach of your lifestyle and budget.

HEATFORM - THE SYSTEM

HeatForm insulated panel pools are the convenient and eco-friendly way to build a high quality in-ground or above-ground swimming pool in your home, garden, spa or school, whilst helping the planet at the same time.

The modular HeatForm panel system allows you to create a pool to suit your own personal requirements, from exercise pools and domestic pools up to large commercial installations.

The panel system is flexible, robust and easy to install. Using our innovative panel system, Heatform pools can be installed either in the ground, half in - half out, or by incorporating Heatform's unique frame system, fully above ground.

The pool panels are manufactured in Devon, UK using insulation made from 100% recycled PET bottles. As well as the ecological benefits associated with a recycled product, this insulated system can also reduce your pool's energy usage by up to 50% compared to a traditional, in-ground concrete pool.

Why Choose HeatForm?

Energy Efficient

- A HeatForm insulated pool can reduce your pool heating costs by up to 50% compared with a standard concrete pool
- HeatForm pool panels comply with the Part-L building regulations regarding U-Values requirements.

Custom Design

- Wall depth options - 0.9m, 1.2m and 1.5m
- No limitations to the pool width or length

Easy Installation

- Quick - 5 x 2.5m exercise pool installed in a week.
- Easy positioning of flow and return fittings in the panel pre-positioned openings

Eco Friendly

- Made in Devon, UK
- Insulated using recycled plastic bottles

HF SPORT OPTIONS

The HeatForm Sport pool comes in two standard sizes - **HF SPORT 5000 (2.5m x 5m)** or **HF SPORT 6000 (6m x 3m)** with a **water depth of 1.2m**.

The HF Sport can be installed either in the ground, or as a free-standing above ground pool.

The adjustable steel support system, on the above ground version, allows the panels to be fixed to a concrete floor to provide a fully self-supporting above-ground installation.

All HeatForm exercise pool kits include the premium Zodiac heating, filtration and lighting equipment as standard.

Add some flair to your design by adding mood enhancing, colour- changing RGBW LED lights or incorporating a stainless steel over-the-wall ladder for a more practical finish.

Each HeatForm exercise pool comes with a choice of counter current jets built into a bespoke support panel. You can choose from a wide range of state of the art jets suitable for all budgets from an Endless Pools Fastlane, or Binder Hydrostar through to the basic Fluvo or Badu jet systems.

HF SPORT SWIM JET OPTIONS

Fitness and swimming ability is unique to each and everyone of us and an important decision in your swim spa design is the choice of swim jet to compliment this.

Whilst some will be seeking a high end, competition-level swimming experience, others will be looking for a much gentler swim experience. The vast majority of exercise pool owners, however, require a swim jet appropriate for a more general all-round fitness and exercise routine.

It is for this reason, we have not restricted the HF SPORT exercise pools to just one brand of swim jet. We have designed a bespoke, end panel option suitable for any of the market leading jets seen here.

Our retailers will be able to offer you further information and guidance on the jet most appropriate for your needs.

HF SPORT INTERNAL FINISHES

All Heatform pools are designed to be installed with a swimming pool liner. The pool liner not only holds in the water it provides the pool finish, which is your chance to stamp something of your own personality onto the project.

As well as classic plain coloured liners with or without patterned tile band designs, recent advances in liner technology have brought exciting textured liner finishes like Alkor Plan Touch and Ceramics to the market.

The standard HF SPORT pools come with a pre-tailored 'bag' liner, however you can opt to have an on-site liner fitted by your installers or the UK's number 1 liner supplier, Aquaflex. These are a more durable and premium product.

HF SPORT EXTERNAL FINISHES

HF SPORT pools can be installed in three ways: in-ground, half in/half out or fully above ground. When installing in-ground the pool surround can be finished in a traditional way with copings and patio or decking. When installed either half in/half out or fully above ground, consideration needs to be taken on how the outside of the pool will look and fit within its surroundings. For a more contemporary feel, HeatForm have developed a unique, recycled cladding and capping system available in four different colours. However, like all the key elements in a HeatForm pool, the external finish can be tailored to your own preferences.

HF Sport with Heatform composite capping in Anthracite and cladding in Cotswold Green

HF Sport with Heaform composite capping in Anthracite and cladding in Cotswold Cream

Heatform capping and cladding

Available in four stock colours, HeatForm's bespoke capping and cladding system is designed with the same technology used in the production of the pool wall panels - recycled bottles encased in fibreglass, which provides a strong and durable finish. Through combining this system with the HeatForm panels, by adding an extra layer of insulation, you are further reducing your heatloss from the pool. Samples of the cladding system are available upon request from your local retailer.

If you would rather choose your own style of finish such as decking, natural wood or stone then we have developed and can supply a solution to fix most materials to the Heatform above-ground frame work.

This example of a school pool, has completed the surround with an easily maintained white PVC, tongue and groove cladding.
